Abstract (en)
[origin: WO2007122048A1] The invention relates to a household appliance comprising a housing enclosing an inner chamber and at least one beam (25) which can be mounted in an engaging manner in a first and a second recess of the opposite-lying first and second walls of the inner chamber. At least the first recess is part of a groove (42) which is formed in the first wall. A flexible detent projection (40) engages in the groove (42) and blocks a first end of the beam (25) from moving from the recess along the groove (42) and can be displaced out from the groove (42) by moving the first end along the groove (42) towards the recess.
