Abstract (en)

[origin: WO2007111802A2] An integrated security arrangement is implemented in a variety of embodiments. In one such embodiment an integrated security arrangement includes a plurality of intrusion sensors that sense an intrusion in a target area, a motion sensor, and an image-capture device that is responsive to the motion sensor. When the image-capture device is enabled it captures images of the target area in response to movement in the target area as indicated by the motion sensor. The integrated security arrangement also includes a mapping database that contains data used to associate one or more of the plurality of intrusion sensors with the image-capture device. A user configures the mapping database to select at least one of the intrusion sensors for enabling the image-capture device. The integrated security arrangement further includes a control unit that enables the image-capture device in response to the selected intrusion sensor as configured in the mapping database.
