Abstract (en)
[origin: WO2007121502A1] The invention relates to a device (1) for winding a coil core (3) with a wire (4) for producing solenoids with at least one rotation plate (2) which is adapted to accommodate the coil core (3), a holding device (4) for adjustably holding a bearing element (6) being provided next to the coil core (3) in such a manner that the coil core (3) during winding is rotatably received at the end by means of the rotation plate (2) and the bearing element (6) so as to receive the coil core (3) in a spindle-free manner. The holding arm (5) can be swiveled between a winding position and a rest or replacement position.
