Abstract (en)

[origin: WO2007122050A1] The invention is based on an energy transmission unit comprising a primary unit (22) having a transmission means (26) for the wireless transmission of energy to a secondary unit (36) by means of a transmission oscillation (f) and an oscillation generation unit (28) for generating the transmission oscillation (f). In order to achieve a high degree of flexibility in use, the invention proposes that the oscillation generation unit (28) has a decoupling means (40), which is provided for the purpose of decoupling at least one harmonic associated with the transmission oscillation (f).
