Abstract (en)
A tool cabinet including an upper cover (5), a bottom board (6), a case body and a shelf accessory. The case body includes rotatably interconnected case boards, which are foldable with each other. The upper cover (5) and the bottom board (6) are loosely rabbetted into the case body. Without disconnecting each case board, each case board can be folded only by pulling out the pin in the upper cover (5), turning over the upper cover (5), then taking out the shelf and the upright column (8), releasing the block rabbeting, and folding the case boards. It is done after the shelf and the upright column (8) are placed into a predetermined space of the right board and the back board during the folding process. It is very simple and convenient. Hence, it is convenient to carry the tool cabinet after it is folded. In another embodiment, a tool cabinet is also constructed with hinged panels and doors that after assembly can be easily folded into a compact unit for storage or shipping.
