Abstract (en)  
[origin: EP2011605A2] The tool (1) has drive elements for driving a working head (2) provided in a body unit. A switching movement allows a powered movement of the working parts of the working head to be triggered. The working head is swivelably connected to the body unit in a rotary connection region. The rotary connection region includes an axis of rotation, where swivelling of the body unit relative to the working head about the axis of rotation allows a switchingover movement to be carried out with respect to the powered movement of the working part.
