Abstract (en)

[origin: EP2012022A2] The device (100) has a deaerating-and/or ventilating chamber (110) provided with an inlet connection (120). An outlet connection (130) is provided for each actuator exhibits a group of air pressure absorbing moldings (210, 220, 230). The moldings are arranged and shifted from each other both in the air mainstream direction and perpendicular to air mainstream direction so that the moldings represents a close wall in the air mainstream direction.
