Abstract (en)
[origin: CH696456A5] The part has a handle with a cladding, and a function unit formed at the handle. A terminal ridge and two longitudinal ridges projecting from the cladding are arranged at two sides of the handle. The ridges are designed in such a manner that the ridges of one of the sides of the handle engage with the ridges of another side of another flatware part in a form-fitting manner, when a set of flatware parts is stacked.
