Abstract (en)
[origin: FR2900068A1] The door (19) has a square shaped light (10) with defined dimensions, practiced either side along a transversal axis of the door. A deflector (12) is positioned on an inner side (11) of the door in a reversible manner by forming a predefined acute incidence angle with the door. The deflector is connected and fixed on a plate, and is mounted in a removable manner, where the plate and the deflector are molded in a single part. Lateral walls are arranged on sides of the light, perpendicular to the door.
