Abstract (en)  
[origin: WO2007122004A1] The invention relates to a comminuting device, consisting of at least one comminuting cylinder rotatably mounted in a machine frame, having at least one comminuting tool arranged on said comminuting cylinder, and having at least one counter blade which interacts with the comminuting tool, and having at least one screening device for the comminuted material, the housing of said screening device at least partly enclosing the comminuting cylinder, wherein the screening device and the counter blade form a common subassembly. The invention is distinguished by the fact that the counter blade is of plate-shaped design and has apertures which are designed to correspond to the shape of the comminuting tools of the comminuting device.
