Abstract (en)

[origin: WO2007122152A1] The invention relates to a vibration device in a device for producing moulded concrete blocks by compacting a concrete mixture in a mould (FE) and by vibrating said mould. According to the invention, a hydraulic actuator (RA) comprising a fluid chamber (FK), which is delimited by a flexible membrane (ME), is used. A preferred embodiment for an actuator suitable for said invention is also described.
