Abstract (en)
[origin: WO2007123447A1] The invention relates to an access system (2) for a vehicle (1). The system comprises a pivotable door (3) mountable in the body of the vehicle and a pivotable lid (6) mountable in the chassis of the vehicle for covering at least one step (9) adjacent to the door. The system further comprises a means (10) for sensing the position of the door (3) relative to its pivot axis, a member (11) for automatically pivoting the lid (6) around its pivot axis, and a means (12, 15) for transmitting an signal emitted from the door sensing means (10) to the lid pivoting member (11) so as to position the lid (6) relative to its pivot axis as a function of the sensed position of the door (3).
