Abstract (en)

[origin: WO2007121982A1] The invention relates to a plastic closure consisting of a rotating cap (1) with a pouring orifice configured in one sector and on the underside a slide (2) that can be guided in a displaceable translatable manner in relation to the pouring orifice. The underside of said slide has a boss protruding downwards. A guide slot cap (3) lies below the slide (2), the cover (6) of said cap also having a pouring orifice configured in one sector and a groove behind said orifice that acts as a slot guide for the boss on the slide (2). The guide slot cap (3) is mounted so that it remains stationary on a bottle neck or container neck. When the rotating cap (1) is rotated in relation to the guide slot cap (3), the boss of the slide is guided along the slot guide, drawing the slide (2) into the open position, whereas when the cap is rotated in the reverse direction, the slide (2) is pushed back into the closed position.
