Abstract (en)

[origin: DE102006020353A1] The mouthpiece (1) has a pinstripe formed by a row of pins (7) which are arranged next to each other, where tips of the pins are positioned such that the tips extend into a suction opening (4). The pins are bent around an angle of approximately 60 degrees. The pins are pressed such that the pins are arranged at a cover plate (11) that is connected with the mouthpiece at a side. An independent claim is also included for a method for manufacturing a pinstripe.
