Abstract (en)

[origin: WO2007118941A1] Device (1) for displaying the correct tightening force for a nut (7) designed to join together two parts (2, 3) of a structure (4), by being screwed onto a threaded rod (60), the assembly being formed by, for example, a threaded fastening system (5) consisting of a bolt (6), a nut (7), at least one nondeformable washer and a display washer consisting of an elastically deformable material such as a synthetic rubber, a natural rubber, an elastomer or a polyurethane plastic, said device being characterized in that at least one of the nondeformable washers comprises on its inside face a projection (103), the inside face (101) of which is designed, following tightening, to bear against the inside face of another washer or against the part to be assembled and in that the deformable washer when compressed projects peripherally, forming an indicator of correct tightening.
