Abstract (en)

[origin: WO2007124822A1] The invention relates to a device for overriding light beams and comprises a base element (10) and a housing (16) which is located opposite the base element (10) on a rotatable arm (15) where said housing is rotatable by means of one or several drive units (11, 12). A light source can be placed in the housing for generating a light beam, wherein at least one control electronics (17) for operating the device is located in the rotatable arm (15) or in the housing (16).
