Abstract (en)

[origin: DE102006019735A1] The headlight has a base light source (2) and a filter unit (5), which is permeable for infrared radiation in two positions. The headlight is actuated in two operating modes, where the filter unit is permeable, partly in a primary operating mode in the path of rays of the light source and outside the path of rays of the light source in a secondary operating mode. An infrared radiation device (3) is activated in the primary operating mode and deactivated in the secondary operating mode. The filter unit is impermeable for visible light.
