Abstract (en)  
[origin: WO2007127011A2] Filters and methods for enhancing the identification of peaks in mass spectroscopy data are disclosed. In particular, the invention encompasses methods using hole array filters for the purpose of purifying biological fluids to be used in generating mass spectra data. The methods of the present invention may be used for enhancing relevant peaks in mass spectra data for use in identifying and diagnosing diseases or for predicting responses to particular disease treatments.
