Abstract (en)
[origin: WO2007128401A1] A support device for photovoltaic panels (7), intended for installations for the production of electrical energy, comprises at least one shaft (3) rotatably supported on a support structure (2) about an axis of rotation (X), with respect to which the surfaces of the panels (7) collecting the luminous radiation are oriented, at least a first and a second framework (5, 6) arranged for receiving one or more of the photovoltaic panels (7), the at least first and second framework (5, 6) being secured to the shaft (3) on opposite sides with respect to the axis of rotation (X), so that the collecting surfaces of the panels (7) assume a substantially coplanar configuration, wherein the first and second framework (5, 6) are removably secured in an adjustable manner to the support shaft (3).
