Abstract (en)
In an elevator apparatus, a first car chamber of a first car and a second car chamber of the first car are displaceable with respect to each other between a first position at which the first car chamber and the second car chamber are aligned with each other horizontally and a second position at which the first car chamber and the second car chamber are aligned with each other vertically. The first car can move past a second car when the first car chamber and the second car chamber are each located at the second position. The first car chamber is provided with a first front doorway and a first back doorway. The second car chamber is provided with a second front doorway and a second back doorway. A back surface of the second car is provided with a rescue doorway.
