Abstract (en)

The device has a controllable damping unit (3) for changing acceleration acting on a lift car floor (2) of a transportation unit e.g. building lift. A control unit controls the damping unit based on an operating condition of the transportation unit. The damping unit comprises an active processing device to compensate acceleration values. A measuring device determines a change of loading of the transportation unit and a signal that characterizes the operating condition. The damping unit has a damping element (4) that is provided with fluid in pipes, which communicates with each other. An independent claim is also included for a method for compensation of an acceleration value of a loadable lift car floor of a transportation unit.

Abstract (de)

Vorrichtung zur Kompensation eines Beschleunigungswertes eines beladbaren Fahrkorbfußbodens (2) eines Transportmittels, insbesondere einer Aufzugsanlage, wobei das Transportmittel zumindest einen Antrieb sowie einen Fahrkorb (1) mit einem Fahrkorbfußboden (2) aufweist.
