Abstract (en)  
The cooling device comprising an inner wall (12") adapted to contain a product (14") to be cooled during use, said inner wall being wholly or partly covered with a fluid-absorbing element (16"), such as a wick or blotting paper having a first side in contact with said inner wall and a second side exposed to a surrounding atmosphere. The fluid-absorbing element being in fluid contact with a fluid reservoir (20") so that continuous evaporation of fluid transported from said reservoir to the fluid-absorbing element cools said inner wall by evaporative cooling.
