Abstract (en)
[origin: EP2015261A1] The unit (1) has a housing with a transparent region that enables view of goods (3, 4) that are provided in the housing. The transparent region is designed as a control panel (7) for selection of desired goods. The desired goods are identified by a specific contact region on the control panel without a keyboard or figure representation. The control panel is designed as a housing cover (6) or a part of the housing cover. The control panel is divided into contact sections (8), where the sections are different from one another and correspond to different goods. An independent claim is also included for an assembly of two spatially arranged goods sampling units.
