Abstract (en)  
[origin: EP2015391A1] An electrical component fastened in a cartridge (1) has an electrical element connected to electrically conductive region in cartridge side wall (16), through an electrical connection. The electrical connection is provided by soldering or an electrically conductive adhesive. The cartridge side wall is pierced with orifice extending through entire thickness of the side wall so that direct access to the electrical connection is provided. An independent claim is included for method of fabricating coaxial device.
