Abstract (en)

[origin: WO2007131632A1] The invention relates to a rotary tablet press with washing device and to a rotor for it, said rotor being provided at least with a bottom-punch guide ring (11) having guides (12) for bottom punches and with a die plate (17) arranged between the punch guide rings, wherein at least one sealing element (26) interacting with the associated punch is provided for the bottom punches. In order to improve the use of an automatic washing device, a leakage passage (3) for draining off the washing liquid is formed according to the invention in the bottom-punch guide ring for each bottom punch guide. The leakage passages are preferably to perform their draining function only when leakages occur unnoticed at individual sealing elements of the bottom punch guides.
