Abstract (en)
[origin: WO2008040570A1] The invention relates to a method for operating an internal combustion engine (2) having the following steps: provision of an internal combustion engine (2) for producing thermal energy; operation of the internal combustion engine (2), in which a fuel is burned to obtain the thermal energy; detection of the concentration of at least one pollutant, which is produced during the combustion, in the surroundings of the internal combustion engine (2); regulation of the operation of the internal combustion engine, in which a characteristic variable of the internal combustion engine is set according to the detected concentration in such a way that the emission of the pollutant is reduced.
