Abstract (en)

[origin: WO2008014863A1] Device for actuating a power control device of an internal combustion engine, comprising an input device which can be actuated by the driver for the driver-side input of a power request, a sensor device for detecting the position of the input device and generating a corresponding output signal, an actuating device for adjusting the power control device with consideration of the output signal of the sensor device, wherein the power control device can be actuated by the actuating device in a manner which deviates from the signal of the input device and the actuating device is connected to the power control device by means of a coupling which has an input part and output part, the input part of which is assigned to the actuating device and the output part of which is assigned to the power control device, and method for actuating a power control device.
