Abstract (en)
  [origin: WO2007128303A1] Proposed is an electrically driven rotary piston machine which operates as a rotary piston pump or rotary piston
  compressor, having a base housing (1) which holds an electric coil (2) and a pump head (3), wherein the pump working space is preferably
  delimited by a trochoidal toothing of the rotors (15, 17). According to the invention, the pump head (3), which can usually be produced relatively
  cost-effectively, is designed as a disposable part and therefore has a quick-action connection (7, 10, 11, 12, 14) to the more expensive base housing
  (1).
