Abstract (en)

[origin: WO2007125008A1] The invention relates to an ignition coil (10), especially for an internal combustion engine of a motor vehicle, with a spool (13) laid out on a secondary winding (14) to generate high voltage at a spark plug, with contact sleeves (18; 18a) that can be pushed over the end (17) of the spool bodies (13) and which is outfitted with at least one contact element (22; 22a) for the secondary winding (14), as well as with a suppression element (25; 36) which can be pushed over the contact socket of a connector (18; 18a) in an axial direction of the spool body (13) as seen in its end position, whereby at least one contact element (22; 22a) juts out over the contact sleeve (18; 18a) and covers at least one contact element (22; 22a).
