Abstract (en)
[origin: EP2017195A1] A connector structure that can minimize the amount of liquid remaining in a container is provided. In a connector structure that is attached to an opening 2 of a container 1 and including a siphon tube 11 for extracting a liquid inside the container 1 with pressure of gas introduced into the container 1, a gas channel 12 for introducing the gas and a liquid channel 13 for extracting the liquid are formed by joining together a plug 40 and a socket 20, and an axis Cs of the siphon tube 11 and an axis Cv of the container 1 have a predetermined inclination angle , therebetween.
