Abstract (en)

[origin: EP2017376A1] The method involves storing a set of unspinning programs (26) in a machine control (21). The appropriate unspinning program is selected from the unspinning programs in dependence of a spinning yarn number, spinning yarn type, yarn rotation and machine configuration by the control or a user. The unspinning program executes a selective change of yarn characteristics during unspinning processes against a yarn produced according to a spinning program (23) to achieve a yarn strength optimally adapted to a spinning process, a spool changing process and an unspinning process.
