Abstract (en)
Pertaining to wall coating systems using wooden boards, the invention consists of securing said boards (4) to the wall (3) via metal profiles (1), specifically of sheet metal, which, concealed behind the boards, are secured to the wall by screws and provide the support surface for said boards whereby, they are attached to the profiles by reusable Velcro ® style adhesive strips, making the boards detachable. This achieves that the boards are attached to the wall in a practically uninterrupted manner, and therefore that the metal profiles do not interfere with the decor of the enclosure, and that the boards may easily be dismantled to change the exterior surface or replace.
