Abstract (en)
[origin: EP2017457A2] The device (9) has exhaust outlet channels (16) arranged corresponding to a number of cylinders of an internal combustion engine. A movable divider element (14) is arranged between an exhaust inlet channel (13) and the exhaust outlet channels. The divider element is driven corresponding to a number of revolutions of a cam shaft of an internal combustion engine. A fluid connection of the exhaust inlet channel with each of the outlet channels is produced by the divider element. The divider element is connected with the cam shaft by a coupling (15).
