Abstract (en)

[origin: EP2017683A2] The device has a seal (10) between a positioning cap and a housing (2) of a clock with an arranged bar (11,30) within region of positioning cap at the housing. A bolting device is provided for pressing positioning cap over the seal against the housing. The bolting device is screwed in the bar, at the exterior of the positioning cap affecting screwing element (3). An independent claim is also included for a method for sealing positioning cap of clock by a device.
