Abstract (en)  
[origin: DE202006007836U1] The lift cabin, for towers and cranes and wind turbines and the like, has a base with a number of side walls fixed to it. A side opening is closed by a door (20). One door panel (21) gives a sliding support to the second door panel (22) through a number of longitudinal extensions (40,41,43). The first panel moves through rollers (27,28) on profiled C-shaped guides parallel to the side opening and the side walls, to give the door a sliding and swing action.
