Abstract (en)

[origin: WO2007135253A2] The invention concerns a door (1) comprising: a frame (2) fixed to a wall (3), including two lateral posts (5, 6) and a transverse portion; an apron (4) mobile via electromechanical driving means between a closed position and an open position; a bundle of electrical cables, each cable corresponding to a functionality of the door and connected to a component of the door corresponding to said functionality; a conduit (13) including a first end attached to the frame and a second end attached to a control box (10), said cables being arranged in said control box and connected each to a control and/or indicating member (11, 12) provided on the box, the conduit being designed to form a sealed housing between the box and the frame of the door (1).
