Abstract (en)
[origin: EP1850194A1] The watch has a depth indicating hand (14) indicating a diver about an instantaneous value of a depth at which the diver is found, and a depth variation indicating hand (22) blocked at zero during diving. The hand (14) is blocked when the diver reaches a level of decompression to be carried out. The hand (22) is released to indicate the diver about variations of the depth with respect to a depth of the decompression level. The hand (22) is returned to zero and blocked, while the hand (14) is released, and indicates a precise diving depth, when the diver continues rising towards a surface.
