Abstract (en)
[origin: EP2018937A2] The device (11) has a damping sleeve (31) provided as a damping element between a bearing section (24) of a handle (21) and a handle mounting axis (30), where the sleeve is made of elastic material. A damping body (36) is provided as another damping element at free ends that are opposite to an end region (25) of the handle. The damping body comprises an extension in radial direction relating to a longitudinal axis (23) of the handle. The extension is larger than a minimum radial extension of the handle at the free ends of the handle.
