Abstract (en)

[origin: EP2019125A2] The present invention relates to a run flat tire having improved durability during a blowout, an increased running distance and velocity, and using for a side portion reinforcing layer a rubber composition including a rubber component containing 20 to 80% by mass of styrene-butadiene rubber including 5 to 60% by mass of syndiotactic 1,2-polybutadiene crystal, and 10 to 80% by mass of natural rubber and/or polyisoprene rubber, and carbon black blended in an amount of 10 to 80 parts by mass with 100 parts by mass of the rubber component. The rubber composition preferably contains a C5-based petroleum resin having a number-average molecular weight of 300 to 10000, which is obtained by polymerizing C5-based petroleum hydrocarbon, in an amount of 0.5 to 10 parts by mass with respect to 100 parts by mass of the rubber component.
