Abstract (en)
[origin: EP2019178A2] The lock has an actuating device (51) coupled with a lock bar (53) by a connecting section (55). The lock bar is moved from a locking position in which the lock bar is pre-stressed, into a release position. A locking body (11) accommodates a numerical locking mechanism (47) to lock or release the lock bar. The actuating device is arranged opposite to the numerical locking mechanism with respect to a locking area (59) of the locking body. A hinge bar retainer (13) exhibits two ends (21, 23), where the end (21) is connected with the locking body.
