Abstract (en)
[origin: WO2007134932A2] A closing and retaining device for an extension guide with automatic retraction has a housing (4) on which a driver (5), which can be coupled to a rail (2) of an extension guide, is retained in a displaceable manner, wherein a damper housing (9) is fixed on the housing (4) and a displaceable piston rod (10), which can be coupled to the driver (5) via a latching connection, is arranged on said damper housing. The damper housing (9) can be displaced in the direction of movement of the piston rod (10), wherein, after coupling of the latching connection for fixing the piston rod (10) on the driver (5), the damper housing (9) can be pushed back into an operating position by the driver (5). As a result, simple installation of the damper on the closing and retaining device is possible.
