Abstract (en)

[origin: WO2007129914A1] The invention relates to a post, particularly for use in a cable barrier. The post has at least two apertures that receive and retain a cable. In addition, the apertures are configured to assist in the release of the cable from the aperture, when an impact force is applied to the post and/or cable. The post also allows for easy insertion into or removable from an already erected cable barrier system without having to release the cables or dig large post holes to allow room to manoeuvre the post into position.
