Abstract (en)

[origin: WO2007131500A1] A description is given of a unit comprising two glass panels that are connected to each other by means of a connecting medium, in particular a glass frit, and have an intermediate space, for fabricating flat screens, flat discharge lamps and the like. The unit has a device, extending from the intermediate space to the outside for filling with a process gas. The filling device is arranged parallel to the plane of the glass panels and extends through the side wall of the unit. As a result, the unit is of a particularly compact form. Furthermore, a method for producing such a unit is explained.
