Abstract (en)
[origin: WO2007136171A1] A refrigerator includes a main body having a door sensor (211) that detects an opened state and a closed state of a door of the refrigerator; a vegetable box (100) disposed in the main body to provide a space for receiving therein vegetables; and a control unit. The vegetable box (100) includes a storing unit for storing therein the vegetables; and a photosynthesis promotion unit for emitting light required for photosynthesis of the vegetables to an inside of the storing unit. The control unit outputs a control signal for operating the photosynthesis promotion unit according to a detected result of the door sensor (211).
