Abstract (en)

The subject of the invention is the panel's unit module and the method of fixing on it the single- or multi-layer covering using the "dry" method, without using any glue. Moreover, this method enables reversed disassembly, separation and replacement of covering with other one, for application in production processes of products in the form of various wall cladding and floor and ceiling covering for finishing the utility interiors inhabited by humans. The panel, as the module's unit, has been fitted with a unified system of locks 3 in which, using a key 4 or a string 5, covering 2 is fixed.
