Abstract (en)  
[origin: EP2020479A2] A roller blind assembly for a roof window. The assembly has two side rails (4,6) for mounting in parallel on either side of a window pane and a pair of movable end rails (8,10) for mounting perpendicular to the side rails and extending from one side rail to the other side rail. Each end rail has a roller (14,15), about which a covering can be wound and unwound. The covering includes, at about its middle between the end rails, a rigid bar or an adhesive coating (40,42) that extends longitudinally between the side rails for holding the covering adjacent to, or in contact with, a window pane.
