Abstract (en)  
[origin: WO2007128495A2] The present invention relates to solid pharmaceutical compositions of gabapentin that have good stability and good bioavailability of the active principle, and that can be used for preparing pharmaceutical solid forms of gabapentin for oral administration. The pharmaceutical composition of the invention is a solid composition comprising an intragranular phase and an extragranular phase. It is a solid composition that is of a granular appearance, but includes non-granulated particles of the extragranular phase. The invention lays on the incorporation of a hydrophobic compound in the intragranular phase, and a humectant in the extragranular phase which leads to the preparation of solid compositions of gabapentin that have good stability and good bioavailability of the gabapentin.
