Abstract (en)
[origin: WO2007131499A1] The invention relates to a clamping device comprising a top part (1) provided with an adjusting mechanism for a clamping arm that can be pivoted into a clamping position and an opening position on the top part (1), and a housing (7) carrying the top part (1) and comprising an inner region for receiving a linearly mobile adjusting rod which is connected to the adjusting mechanism (3) and to a drive arranged in the housing (7). According to the invention, the housing (7) is embodied as an extruded hollow profiled element (8), the inner region having a uniform inner cross-section over the entire length thereof.
