Abstract (en)
[origin: FR2900132A1] The unit (C) has a base body (1) forming an orifice for distributing fluid product, and a mounting piece (20) fixedly mounted on the base body. A cover (25) is connected to the mounting piece by a flexible hinge (26), and closes the distribution orifice. The mounting piece defines a flat sealing zone (21) which is in sealed contact with an opening of a fluid reservoir, and a peripheral contact zone (22) which is in contact with the base body. An independent claim is also included for a method for fabricating a fluid distributor.
