Abstract (en)
[origin: WO2007138630A1] The device comprises: a suction duct (7) with a first end and a second end; a retaining member (5) to hold a flexible article (M) inserted at least partly in said suction duct; and a suction opening (21) which places the inside of the suction duct in communication with the outside, arranged in an intermediate position between the retaining member and the second end.
